Detection of Respiratory Infections by PCR

Turn-around-time is 24 hours for all tests Sample types: Nasopharyngeal eSwabs

Influenza A/B PCR with 2009 H1N1

Performed with FDA approved test

Respiratory Panel by PCR

- Influenza A subtypes H1, H3, and 2009 H1N1
- o Influenza B
- o Respiratory Syncytial Virus (RSV) subtype A and B
- o Parainfluenza (PIV) 1, 2, 3 and 4
- o Human Metapneumovirus (hMPV)
- o Rhinovirus/Enterovirus
- o Adenovirus
- o Bordetella pertussis
- Chlamydophila pneumoniae
- o Mycoplasma pneumoniae
- o Coronavirus 229E, HKU1, NL63, OC43
- Viral detection important in pediatric and immune-compromised populations
- Performed with FDA approved test

Atypical pneumonia PCR

- Detection of Mycoplasma pneumonia and Chlamydophila pneumonia.
- BayCare Laboratories validated real time PCR test.

Bordetella pertussis/parapertussis PCR

- Identification of infection with Bordetella pertussis causing whooping cough
- Differentiation from less severe parapertussis.
- BayCare Laboratories validated real-time PCR test

Legionella pneumophila PCR Cytomegalovirus (CMV) PCR

• BayCare Laboratories validated real-time PCR tests
